

EFFICIENT REFRIGERATION SYSTEM DESIGN **CPD TRAINING SEMINAR**

The world of refrigeration is changing rapidly especially within the food service sector.

Revised building standards along with a clients needs to reduce both their carbon footprint and their energy costs are driving change.

It is now common to see a refrigeration system or coldroom specified that will provide compliance with BREEAM regulations or that will provide a client with significant energy savings.

Efficient refrigeration system & coldroom design requires specialist knowledge with regard to how BREEAM points can be gained for a client using CO2 and Hydrocarbon refrigeration systems.

However, efficient refrigeration systems are not all about utilising more environmentally friendly refrigerants. Standard refrigerants when used within either centralised refrigeration packages or with waste heat recovery 'up-cycling' systems can provide real energy cost savings for a client.

IN SUMMARY... TECHNOLOGY AND REFRIGERATION SYSTEM DESIGNS ARE MOVING FORWARDS AT A PACE...

As a result, industry must not stand still and must not be content with doing things the same way!

This is the reason why the leading Efficient Refrigeration Specialist - Green Cooling has launched a NEW CPD Training Seminar...

Efficient Refrigeration System Design

This new CPD Training Seminar covers:

- Where is refrigeration now?
- Where does it need to be?
- What is efficient refrigeration?
- Best practice refrigeration & cold room design
- How can refrigeration benefit BREEAM projects
- Centralised refrigeration systems
- Simultaneous cooling & hot water heat recovery systems
- Hydrocarbon refrigerants
- Natural refrigerants (CO₂)
- Energy & temperature monitoring systems

The CPD Training Seminar is designed to benefit specifiers designers operating within the food service sector, providing them with the latest refrigeration system design knowledge.

Alongside these training modules Green Cooling provide a complete design & specification support service, which enables a food service system designer to benefit from tailored support provided by the in-house Green Cooling refrigeration design team.

A full service approach is provided from initial refrigeration/cold room design & specification through to installation and commissioning.

THE EFFICIENT REFRIGERATION SYSTEM DESIGN CPD CAN BE PROVIDED AT YOUR PREMISES AT A TIME TO SUIT YOUR TEAM.
